MRI REPORT

MRN	: IHL1037895	Order No	: ID12609508359
Patient Name	: M MOHSIN CHOWDHURY	Exam No	: 260266930
Age/Gender	: 59Y 1M 28D / Male	Order Date	: 08/09/2026
Report No	: 1260000165103	Exam Date	: 08/09/2026 03:09 pm
Bed No	: 2-DB-33	Report Date	: 08/09/2026 08:09 pm
Ref. Doctor	: DR. DANIA RAHMAN	Report Status	: FINALIZED

Test Name : **BRAIN PLAIN EPILEPSY PROTOCOL MRI**

Clinical information: H/O syncopal attach.

Technique: T1WI Sagittal, T2WI coronal & T1WI, T2WI, FLAIR and DWI axial.

Findings:

- **Mild generalized cerebral atrophy evident by mild dilatation of ventricles and extra ventricular CSF spaces.**
- **Focal T2WI and FLAIR hyperintense areas without DWI restriction are seen in subcortical white matter on both sides.**
- **Hippocampus appear normal in signal and volume.**
- **No sign of abnormal cortical thickening or dysplasia.**
- No mass effect or midline shift is evident.
- No restriction is seen in DWI.
- Sellar and para sellar regions appear normal.
- Pituitary gland is normal.
- The posterior fossa, brain stem & the CP angles appear normal.
- Visualized parts of cranial nerves appear normal.
- Right and left orbits with their contents appear normal.

Impression:

- **Mild generalized cerebral atrophy.**
- **Bilateral chronic microvascular white matter ischemic change (Grade - I).**
- **No acute infarct or hemorrhage.**
